

1. **Download Java 8** from:

<http://www.oracle.com/technetwork/java/javase/downloads/jdk8-downloads-2133151.html>

(A version of Java 8 should already have been installed on your machine.)

2. **Set Environment Variable** in your machine

Assuming you have installed Java in `c:\Program Files\java\jdk` directory:

Right-click on 'My Computer' -> select 'Properties' -> select 'Advanced system setting' -> select 'environment variables'.

Now, alter the 'Path' variable so that it also contains the path to the Java executable. Example, if the path is currently set to

'C:\WINDOWS\SYSTEM32', then change your path to read

'C:\WINDOWS\SYSTEM32;`c:\Program Files\java\jdk\bin`'

(It should match your java installed directory)

3. If necessary, you can **download Eclipse** from:

<http://www.eclipse.org/>

but your machine should already have Eclipse installed.
